LETTER OF TRANSMISSION.

I have the honor to submit herewith a portion of the history of the MEDICAL DEPARTMENT OF THE UNITED STATES ARMY IN THE WORLD WAR. The portion submitted is entitled "*Medical and Casualty Statistics*," and is Part Two of Volume XV, on the subject of STATISTICS.

The various parts of this history, irrespective of sequence in volume numbers, will be published from time to time in such order as material becomes available.

M. W. IRELAND,
Major General, The Surgeon General.

The SECRETARY OF WAR.

[a] The highest rank held during the World War has been used in the case of each officer.

[b] On August 8, 1924, Col. Charles Lynch ceased to function as editor in chief of the history by reason of his retirement from the service, and became a member of the advisory editorial board.

PREFACE.

Publication of this part of the volume on statistics, containing the medical and casualty statistics for the United States Army during the World War, completes the war statistical work of the Surgeon General's Office, with the exception of such special statistical matter as may find place in the professional volumes.

This work really began with the reorganization of the medical records section of that office in October, 1917. It has been carried out through various administrative changes, all of which are described in Volume I of this history. The final change was the authorization of the Statistical Division in the Surgeon General's Office, effected by Office Order No. 5, Office of the Surgeon General, W. D., February 15, 1921. This division is responsible for the compilation of the statistics included in the present volume.

As a result of the war statistical work of the Surgeon General's Office three statistical studies have already been prepared and published. The first, "Physical Examinations of the First Million Draft Recruits; Methods and Results," was published, in 1919, as Bulletin No. 11 of the Surgeon General's Office. This was a study of the physical examinations of the first million draft recruits who were sent to military camps. The second, "Defects Found in Drafted Men," published by the War Department, at the Government Printing Office, in 1920, was a study of the physical examinations of all selective service men of the first and second registrations who were rejected by the local boards as physically or mentally unfit for all military service; and of approximately 2,000,000 selective service men sent to military camps. The third, "Army Anthropology," was published as Part I, of this volume.

Medical and casualty statistics have also been published from year to year in the reports of the Surgeon General for 1918, 1919, and 1920. These contain such statistics for the calendar years of 1917, 1918, and 1919, respectively. Many data contained in these reports, with some additional data, will be found in the following pages. Comparison of the tables in the Surgeon General's annual reports for the years mentioned with those in the present volume will reveal some differences. In all such cases the figures which appear here should be given preference.

Later, The Adjutant General proposes to publish final casualty statistics which will be based on a careful study of the complete records of all the individuals concerned. These figures also will vary to some extent from those which appear here, due mainly to the fact that they were prepared solely for military purposes while those of the Medical Department had other purposes in mind as well.

During the war approximately 12,000,000 individual medical records were received in the Surgeon General's Office, all of which have been utilized for the

statistics which appear in the present volume. For the statistical tables in the Annual Reports of the Surgeon General for 1917, 1918, and 1919, and for the present volume, approximately 5,000,000 perforated statistical cards were prepared.

The assistance of Maj. Charles B. Davenport, S. C., is gratefully acknowledged. While this officer was not so intimately or directly concerned in the preparation of the present statistics as with that of the other statistical compilations which have been mentioned above, he performed most valuable services in connection with the compilation of statistics for the 1918 report of the Surgeon General, which have been largely made of use here.

Maj. Robert Delafield, S. C., who served as assistant in the medical records section during its early days, also performed a valuable service to this volume in that his painstaking work at that time is reflected in the present tables.

At the maximum, approximately 350 clerks were employed at one time in the medical records section. Practically all of them performed their duties intelligently, thoroughly, and conscientiously. All of those who so served in the section played his or her part in the preparation of the present volume. Only a few clerks, comparatively speaking, have remained, however, and have worked directly in getting the matter ready for the press. It is a special pleasure to acknowledge the assistance of those most directly concerned by name:

Mr. William H. Deggs, principal clerk of the medical records section, since retired; Mr. Huntt P. Larcombe, now principal clerk of the division; Mr. Silas Berryman; Miss Helen R. Markley; Miss Loretta O'Donnell; Miss Viola N. Rose; Miss Anna T. Buckley; Miss Bertha Shipley; Miss Elizabeth Holland; Mrs. Harriett Rogers; Mr. Myer Lipshitch; Miss Mary C. Saunders; Miss Bew Patten; Miss Nellie Albee; Mrs. Katheryn Kavanagh; Miss Inez Tyler; Mrs. Blanche E. Moore; Miss Elsa M. Hansen; Mrs. Ella F. Miner; Mrs. Mary Roberts; Miss Ruth W. Harris; Miss Annie E. Bray.

44. Strength by arms of service, and by months, total officers and enlisted men, American Expeditionary Forces, 1918 82
45. Strength, Russia and Siberia, 1918 and 1919 82
46. Admissions, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 86
47. Admissions, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 110
48. Deaths, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 134
49. Deaths, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 150
50. Discharges for disability, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 166
51. Discharges for disability, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 190
52. Days lost, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 214
53. Days lost, by countries, including transports, officers and enlisted men, white, colored, Filipino, Porto Rican, and Hawaiian, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 238
54. Admissions, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 262
55. Admissions, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 278
56. Admissions, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 294
57. Admissions, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 310
58. Deaths, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 326
59. Deaths, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 338
60. Deaths, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 350
61. Deaths, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 362
62. Discharges for disability, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 374
63. Discharges for disability, by months, white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 390
64. Discharges for disability, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 406
65. Discharges for disability, by months, white enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 422
66. Admissions, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 438

Table. Page.
67. Admissions, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 454
68. Admissions, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 470
69. Admissions, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 486
70. Deaths, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 494
71. Deaths, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 502
72. Deaths, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 510
73. Deaths, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 514
74. Discharges for disability, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 518
75. Discharges for disability, by months, colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 534
76. Discharges for disability, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 550
77. Discharges for disability, by months, colored enlisted men in Europe, April 1, 1917, to December 31, 1919, inclusive; annual ratios per 1,000 556
78. Admissions, by months, enlisted men, color not stated, in Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 560
79. Deaths by months, enlisted men, color not stated, in Europe, April 1,1917, to December 31, 1919, inclusive, absolute numbers 568
80. Discharges for disability, by months, enlisted men, color not stated, in Europe, April 1, 1917, to December 31, 1919; absolute numbers 572
81. Admissions and deaths, for diseases, enlisted men, United States and Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers, ratios per 1,000, and percentage fatality rates 576
82. Concurrent diseases, complications and sequelæ, enlisted men in the United States and Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 580
83. Deaths and discharges for disability, by age, total officers and white and colored enlisted men, United States and Europe, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 670
84. Admissions, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 678
85. Admissions, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 708
86. Deaths, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 738
87. Deaths, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 756
88. Discharges for disability, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive: absolute numbers 774
89. Discharges for disability, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), white enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 804
90. Admissions, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 834

Table. Page.
91. Admissions, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 858
92. Deaths, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 882
93. Deaths, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 894
94. Discharges for disability, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; absolute numbers 906
95. Discharges for disability, by camps of occurrence, and by States of occurrence (excluding troops in specified camps), colored enlisted men in the United States, April 1, 1917, to December 31, 1919, inclusive; ratios per 1,000 930
96. Admissions for diseases (all), by camps, by months, total enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive; absolute numbers 954
97. Deaths, for diseases (all), by camps, by months, total enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive; absolute numbers 956
98. Discharges for disability, for diseases (all), by camps, by months, total enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive; absolute numbers 958
99. Days lost, for diseases (all), by camps, by months, total enlisted men, United States, January 1, 1918, to December 31, 1919, inclusive; absolute numbers 960
100. Admissions, influenza and common respiratory diseases, measles, and the pneumonias, by camps of occurrence, by months, white enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive 962
101. Deaths, influenza and common respiratory diseases, measles, and the pneumonias, by camps of occurrence, by months, white enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive 978
102. Admissions, influenza and common respiratory diseases, measles, and the pneumonias, by camps of occurrence, by months, colored enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive 994
103. Deaths, influenza and common respiratory diseases, measles, and the pneumonias, by camps of occurrence, by months, colored enlisted men, United States, October 1, 1917, to December 31, 1919, inclusive 1007
104. Admissions and deaths, nonbattle injuries, total Army, April 1917, to December, 1919, inclusive. Absolute numbers, ratios per 1,000 strength, rate per 1,000 of nonbattle injuries, and case fatality rates 1015
105. Admissions, battle injuries, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1017
106. Deaths, battle injuries, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1017
107. Discharges for disability, battle injuries, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1018
108. Days lost in hospital, battle injuries, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1018
109. Admissions, battle injuries, by military agents, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1019
110. Deaths, battle injuries, by military agents, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1021
111. Discharges for disability, battle injuries, by military agents, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1022
112. Days lost in hospital, battle injuries, by military agents, officers and enlisted men, 1917–18; absolute numbers and ratios per 1,000 1023
113. Admissions, deaths, and case fatality rates, battle injuries, by poisonous gases, officers and enlisted men, 1917–18; absolute numbers and percentage rates 1023

Table. Page.
114. Admissions, deaths, and case fatality rates, battle injuries, by gunshot missiles, officers and enlisted men, 1917–18; absolute numbers and percentage rates 1023
115. Admissions, deaths, and case fatality rates, battle injuries, by region and by military agent (poisonous gases excepted), single and multiple wounds, officers and enlisted men, 1917–18 1024
116. Admissions, battle injuries, by arms of service, by months, total officers and enlisted men, 1917–18; absolute numbers, ratios per 1,000 1025
117. Deaths in hospital, battle injuries, by arms of service, by months, total officers and enlisted men, 1917–18; absolute numbers, ratios per 1,000 1026
118. Killed in action, by arms of service, by months, total officers and enlisted men, 1917–18; absolute numbers, and ratios per 1,000 1027
119. Admissions and deaths, battle injuries, and killed in action, by arms of service, total officers and enlisted men, 1917–18; absolute numbers, ratios per 1,000, and case fatality rates 1028
120. Wounds by gas and by gunshot missiles, and killed in action, Infantry, Artillery, Machine Gun Battalions, and Engineers, by month and by day, January 1 to November 11, 1918, inclusive 1029
121. Deaths, and wounded American Expeditionary Forces, North Russia and Siberia, August, 1918, to March, 1920, inclusive; absolute numbers 1179
122. Admissions, deaths, discharges for disability and days lost, including killed in action, total army, excluding North Russia and Siberia; absolute numbers, ratios per 1,000, and percentages, April I, 1917, to December 31, 1919, inclusive 1180

SECTION I.

METHODS OF COLLECTING AND COMPILING VITAL STATISTICS.

As it proved, during the World War, it was necessary to utilize for medical and casualty statistics not only reports made to the Surgeon General but, to a considerable extent, certain of those made to The Adjutant General and to the Provost Marshal General.

It is not necessary here to describe the forms of special interest to the Medical Department which were used by the offices of The Adjutant General and the Provost Marshal General. The contrary is believed to be the case respecting Medical Department forms. Those of particular interest from the statistical standpoint are reproduced in Appendix III. Moreover, in other appendices may be found the orders in force regarding registration and reports of sick and wounded.

Vital statistics were compiled for our entire Army, wherever serving, including troops in our tropical possessions and in China. Discussion of the subject here will be carried on under three heads, viz: (1) Strength data and estimates; (2) sick and wounded data; (3) methods of assembling data in the Surgeon General's Office. Then comes an explanation of the terms and methods used. The various tables follow.

STRENGTH DATA AND ESTIMATES.

It was highly desirable, of course, that the strength of the Army day by day be determined in order that its medical and casualty statistics might be evaluated. This proved by no means a simple or a wholly practicable task. As World War methods were based on, though not identical with, peace time methods, it will be best to describe the latter first.

In peace times, before the war, the senior medical officer with each command obtained from the commanding officer the troop strength day by day, and reported the average daily strength for the month at the end of each month. This report was made to the Surgeon General on Medical Department Form No. 51. The form in question, as will be seen later, was a part of the monthly sick and wounded report to the Surgeon General, rendered by the senior medical officer for every command. The data on Form 51 were sufficient to enable the Surgeon General's Office to compile total strengths and strengths in detail in peace save for the fact that then certain officers and men are always detached from their commands and, in consequence, are not included in the strength reports of medical officers. The Adjutant General, however, is in a position to know the total strength of the Army from monthly reports made to him by individuals detached, as well as by all commands. To illustrate how this actually worked out in peace, for the year 1915, the officer strength as obtained from the reports of sick and wounded to the Surgeon General was 4,394; as

reported to The Adjutant General, it was 4,783. The mean enlisted strength of the Army for the same year (American troops, white and colored) by sick and wounded reports was 93,262, and on the returns of The Adjutant General's Office, 94,729. Vital statistics in peace times are figured on the Surgeon General's strength, The Adjutant General's figures being utilized only incidentally. It is also important to remember that the latter figures are not a daily strength but the strength at the end of each month, and consequently could not be used without error in peace; in war, their use would prove even more misleading, especially during periods characterized by great and rapid gains or losses in strength. Certain losses of individuals, viz, killed in action, deaths not at military stations, discharges for disability and retirements, are reported only to The Adjutant General, and these must be taken into account in checking peace-time, as well as war-time, vital statistics.

During the World War the detached list was relatively small, so small that no material error due to this cause resulted. Every effort was made to secure the monthly sick and wounded reports, mentioned above, from home troops, and in the main this was very successfully accomplished. When reports of this character were not received they were demanded by letter or often by telegram from the Surgeon General's Office. The principal difficulty encountered at home was due to the necessity for secrecy, the departure of organizations for service overseas frequently not being learned by the Surgeon General's Office for weeks. When finally learned, however, it was possible to straighten out matters satisfactorily. At home, The Adjutant General's strength figures also were used, but only as checks and for rather minor details. Like methods were in successful operation for troops in our tropical commands. During the demobilization period, at home, as will be seen later, some further use had to be made of The Adjutant General's figures.

From the present point of view, strength data were by no means so satisfactory for the American Expeditionary Forces,[a] nor, as it proved, were strength figures always obtainable thence through the same reports, i. e., identical forms. In the early part of the war, May, 1917, to December, 1917, since Form 51, as part of monthly reports of sick and wounded, was rendered the Surgeon General's Office from the American Expeditionary Forces, this form was utilized for strength data in the same way as like reports at home were used. Through the greater liability to error in reports from a force in campaign, with a constantly changing strength, it was found much more necessary, in the Surgeon General's Office, to check the strength for troops overseas, as given on Form 51 with The Adjutant General's strength at the end of each month, than was the case for troops at home. When Form 53 replaced Form 51, as was sometimes the case, The Adjutant General's strength figures were used. It was found practicable to use Form 51 exclusively for the month of December, 1919, the last month covered by these statistics. In the meantime, from January, 1918, to November, 1919, inclusive, another plan had to be followed for the American Expeditionary Forces. This was due to the fact that for this period strength was not obtainable from reports made to the Surgeon General. While Form 51 was not abolished in the American Expeditionary Forces until the middle of 1918, it was so often not received in the Surgeon General's Office

[a] This term as used here applies to our forces in Europe, excluding North Russia and Siberia.

for the earlier months of 1918 that it could not be relied upon for strength. On June 15, 1918, Form 51 was done away with in the American Expeditionary Forces; thenceforth the form rendered gave no strength figures. The Adjutant General's figures, therefore, had to be relied upon for the American Expeditionary Forces from January 1, 1918, to November 30, 1919, the strength taken being that of the last day of the month. The error (strength at the end of month instead of daily strength) was constant, of course, for the period in question.

Transports afforded the poorest figures of all for strength, and those utilized here are only estimates, based on the best sources of information available. These estimates were made in the following manner: From May, 1917, through November, 1918, from reports of organizations leaving the various posts and camps of the United States, supplemented by the meager reports received from transports; from December, 1918, to November, 1919, inclusive, from reports to the sanitation division of the Surgeon General's Office of the demobilization of troops in the United States, supplemented by reports of organizations serving in the United States and in countries other than Europe, and by the very meager reports of troops traveling on transports.

Strength for troops in Siberia was obtained from monthly reports of sick and wounded (Form 51) sent to the Surgeon General; for troops in Russia, from The Adjutant General's reports, the strength being that of the last day of the month. While strength figures were better than sick and wounded figures, as will be seen later, vital statistics for these two commands were very poor on account of incomplete reports.

STRENGTH OF TOTAL ARMY.

For this, as well as for all other strengths, the reader is referred to the tables covering the subject. It will be found, in the main, that these tables, with their footnotes, are self-explanatory. This renders extended detailed explanation superfluous. On the other hand, on account of the complicated nature of the subject, it has been deemed best, even at the risk of repetition, to discuss here all details which might possibly not be understood solely from study of the tables.

The strength of total Army by months, all countries, for officers and enlisted men, white, colored, and native, is found in Table 1. It is apparent from this table that the increase in strength of officers was coincident with that for white enlisted men, but the great increase in negro troops did not begin until the late spring and the summer of 1918. The demobilization decline was more rapid for negroes than it was for either white enlisted men or for officers. In other words, the negro troops on an average came in later and were demobilized earlier, and consequently were in the military service, on the average, for a shorter period of time.

STRENGTH OF ARMY, UNITED STATES AND EUROPE.

This is shown in Table 2. As stated, the strength on the last day of each month was used for a long period in Europe. This resulted in lowering the sick rates for the period during which the troops were going to Europe, since the

monthly strength used then (end of month) was above the average for the month in question. On the other hand, it resulted in raising the sick rates for the period during which troops were returning to the United States, for then the strength at the end of the month was below the average for the month. For the entire period, while no one month was exactly correct, the monthly excesses probably were equalized more or less by the monthly deficits.

Separate strengths for white and colored troops were not furnished in Europe. It is obvious that, for vital statistics, white and colored should be considered separately. During the calendar year, 1917–18, it was possible to obtain a very fair estimate of the number of colored troops in Europe from month to month, from the estimated number of departures of these troops from posts, camps, etc., in the United States, as shown by their monthly sick and wounded reports, with such additional information as could be obtained from the unsatisfactory reports furnished from transports. When these troops were returning to the United States from Europe, it was impossible to obtain the same data as bases for estimating the separate strengths for white and colored troops remaining in Europe. The estimate then was based on total colored strength, the strength of colored other than in Europe, and on reports of demobilization.

While the white and colored strengths in Europe are believed to be fairly close approximations they must be accepted only as close estimates, and, since much more accurate strengths were obtained in the United States for white and colored troops separately, deductions based on the United States figures would probably be much more significant than for white and colored in Europe.

STRENGTH BY COUNTRIES.

Strength by countries for total Army is given in Table 1. The same information for enlisted men—white, colored, and native—is given in much more detail in Tables 3, 4, and 5. Attention has already been invited, in discussing Table 1, to the differences in the times of mobilization and demobilization of the various classes of troops; Tables 3, 4, and 5 also show this. During the spring and summer of 1918, while the strength of the total Army rose rapidly, there was comparatively little increase in the United States, since troops were then being sent to Europe, where the rise was rapid in consequence. Meanwhile, the strength of the camps in the United States, while not increasing, was being maintained by recruits sent to them who were then trained and sent abroad as the emergency required. Porto Rican troops increased from a strength of 1,444 in April, 1917, to a maximum of 16,664 in November, 1918; Filipino troops from 5,430 in April, 1917, to a maximum of 7,837 in October, 1918 (monthly mean); and Hawaiian troops, which were organized during the war, which attained to a monthly mean strength of 7,058 for December, 1918. Native troops served only in their own country, save Porto Ricans, who served also in Panama, as shown by Table 5.

STRENGTH BY AGE.

The basic information for strength by age was obtained from Army Anthropology (Vol. XV, Statistics, Part One, Table 2, p. 64). This information was obtained originally from the records of the Bureau of War Risk Insurance,

which had the ages given by 3,673,133 applicants for War Risk Insurance, including officers as well as enlisted men.

It should be noted that the age given is usually that of entry into the service, and that the figures apply only to the applicants above mentioned.

STRENGTH OF OFFICERS AND ENLISTED MEN IN THE UNITED STATES BY SPECIFIED CAMPS AND BY STATES (OTHER CAMPS AND POSTS).

The strength of special large camps, and of officers and men not stationed in these large camps but elsewhere in the United States, is shown in Table 7. Officers and men not stationed in these large camps were classified by individual State where stationed, no account being taken of the individual stations within the particular State concerned. While, as mentioned elsewhere, the strength of the large camps was taken from monthly reports of sick and wounded made by senior medical officers to the Surgeon General, at certain camps during the period of rapid demobilization in 1919 it was found by the Surgeon General's Office that some officers and enlisted men were not being so reported from the camps in question; strength figures for these camps, therefore, were increased in the Surgeon General's Office, for the time being, by estimates based on demobilization figures.

The tables which follow Table 7, and the accompanying graphs, go in detail into the matter of strengths by location in the United States.

STRENGTH BY ARMS OF SERVICE AND BY MONTHS, TOTAL OFFICERS AND ENLISTED MEN, AMERICAN EXPEDITIONARY FORCES, 1918.

Strength by arms of service, American Expeditionary Forces (Table 44), has been calculated only for the year 1918. As will be seen later, this strength was used to figure casualties by arms of service. As practically no battle casualties occurred in the American Expeditionary Forces save for the year 1918, no statistics of this character have been computed for the only other year involved, 1917, the very few casualties (60 wounded and 15 killed in action) for that year being arbitrarily carried forward into 1918.

STRENGTH, RUSSIA AND SIBERIA, 1918–1919.

As will be apparent when the tables giving vital statistics for troops in these two commands are consulted, the figures are of little value; however, in the interests of completeness strength Table No. 45 has been made.

SICK AND WOUNDED DATA.

During the World War preparation of individual records of sick and wounded was, as it still is, solely a function of the Medical Department. The forms used for this purpose when we entered the war were originally authorized to be effective January, 1905. They were the report cards (Form 52, Medical Department), report sheet for report of sick and wounded (Form 51, Medical Department), and the nominal check list (Forms 51*a* and 51*b*, Medical Department). Taken together, these constituted a monthly report of sick and wounded made to the Surgeon General.

The method of reporting sick and wounded in vogue when we entered the World War, as prescribed in the Manual for the Medical Department, and as

carried out at home (and practically everywhere else save in the American Expeditionary Forces), throughout the war, is described in Appendix I.

No forms other than those which have been mentioned were used for reporting sick and wounded in peace and they were to be retained in war, save under circumstances which will now be explained.

For war, the Manual for the Medical Department prescribed two additional forms: (1) Diagnosis tags; (2) List of sick and wounded (Form 53).

Diagnosis tags were used in our service for many years before the World War. The Manual for the Medical Department (see Appendix I, pars. 567 and 575, inclusive) prescribed that mobile troops or commands in the theater of operations in time of war should use diagnosis tags, when first aid was given, and should attach them to the bodies of killed in action, examined by the Medical Department personnel. These tags, originals and duplicates (retained in a book from which the originals were torn), were to be collected and forwarded to the Surgeon General's Office, through the chief surgeon. They were of material importance in checking Form 52 and the field medical card (adopted June 15, 1918).

A list of sick and wounded (Form 53, Medical Department) authorized on February 18, 1916, was provided, but only for the use of mobile troops or commands in the theater of operations in time of war, and in lieu thereof the regular peace report of sick and wounded. This form corresponded in size and ruling to "The returns of casualties" (Form 1490, Adjutant General's Office, edition of August 25, 1917). No space was provided on Form 53 for recording the age, nativity, and color of the patient, nor were provisions made for recording the strength of the organization reported upon, or for the movement of (changes in) the command during the month.

The prescribed method of reporting sick and wounded as outlined above was thought to be inadequate for use in the American Expeditionary Forces, and a board of medical officers serving overseas was appointed to consider a revision of the method then in force. This board recommended that the prescribed method be modified for the American Expeditionary Forces. The recommendation received the approval of the commanding general and was published as regulations for "Sick and Wounded Reports for the American Expeditionary Forces," to become effective June 15, 1918. (See Appendix II.)

The principal differences in the method thus adopted from the one previously prescribed follow:

(*a*) The daily report of casualties and changes (Form 22, A. G. O., A. E. F.; Figs. 7 and 8), on June 15, 1918, replaced the list of sick and wounded (Form 53). The former was not used by the Surgeon General's Office. Report sheets (Form 51) and field reports, Forms 83, 84, 85, 211, were discarded. The latter, while Medical Department forms, had no reference to sick and wounded, and will not be referred to again.

(*b*) A field medical card then adopted was a report and a transfer card, made for each patient at the first dressing station or hospital and sent with him in a paper envelope when transferred, preferably attached to his clothing. Appropriate notes showing operations, complications, and other data were recorded on this form at each hospital he entered. The diagnosis tag was required to be placed in the envelope containing this card. The field medical

card remained with the patient until his final disposition in Europe, or, in case of transfer to the United States, until he arrived at the hospital designated for his treatment there.

(*c*) Form 52 was still used, but in the American Expeditionary Forces only hospital cases were so reported. Furthermore, the use of Form 52 was confined to one hospital, the last one in which the patient was treated in Europe prior to transfer to the United States, or to any other disposition, as death, or duty. For every case finally so disposed of in Europe, a report card (Form 52, A. E. F.) and a field medical card were forwarded to the Surgeon General through the chief surgeon, American Expeditionary Forces, at the end of the month; but for every case transferred to the United States, a report card only was forwarded to the Surgeon General, the field medical card being sent with the patient to his hospital. As a matter of fact, many of the latter were lost in transit from the American Expeditionary Forces.

(*d*) No cases treated in quarters or in infirmaries were reported, nor was any case reported which was carded for record only.

One further difficulty occurred abroad. In Europe (exclusive of North Russia), in North Russia, and in Siberia some of the American sick and wounded were treated not by our own medical officers but in the allied hospitals. Efforts were made by the medical authorities to secure from these hospitals accurate records of all such cases. A central office was established in Paris, and many such records were collected and forwarded to the Surgeon General's Office. Judging, however, by the incomplete character of some of the records received, it is probable that for a part of the admissions to these hospitals, and for some of the deaths which resulted, no records were received.

The greatest difficulty encountered was in obtaining accurate records from troops traveling on transports. This was due to the fact that Army medical officers were not generally in medical charge on transports, and no arrangements were made with the Navy, or with civilian transport surgeons, for medical reports for sick Army personnel en route. As a result the reports of the sick and wounded obtained from transports were practically worthless. The inadequacy of these transport reports during the influenza epidemic in September and October, 1918, probably accounts in great part for a discrepancy (amounting to 1,649) in the number of deaths from disease reported by The Adjutant General and by the Surgeon General as having occurred in the American Expeditionary Forces and on transports. It is only fair to say, however, that a part of the discrepancy is probably attributable to the inability of our medical authorities to obtain records of all deaths which occurred among our men in the hospitals of our allies.

METHODS OF ASSEMBLING STATISTICAL DATA IN THE SURGEON GENERAL'S OFFICE.

METHOD OF ASSEMBLING STRENGTH DATA.

All pertinent data with reference to strength were collected from The Adjutant General's Office and from the Provost Marshal General's Office, in the medical record section of the Surgeon General's Office; there they were carefully studied by experienced clerks under the direct supervision of the officer in charge. As explained elsewhere, their figures were utilized for strength

tables in so far as the Surgeon General's better figures for vital statistical purposes were not available. When the Surgeon General's figures covered strength, it was a matter of very simple mathematics to obtain from them strengths in gross and in detail. Certain estimates of strength were also made in this branch of the medical record section.

METHOD OF ASSEMBLING SICK AND WOUNDED DATA.

From what has been said it will be understood that for each Army patient there was made a report card or cards covering his sicknesses or wounds, and that these cards were sent monthly to the Surgeon General's Office. Compiling statistics from such cards then consisted merely in assembling and counting the cases in gross and in detail, though this process might and actually did prove very complicated. Before the war the report cards were first filed by post or organization. After the disease numbers (International Classification) had been entered on the individual report cards, each case was assembled by following it through all report cards made for it. Great statistical sheets were then utilized for transcribing the case records numerically from the individual report cards, and thus were compiled the vital statistics to be finally published in the Surgeon General's annual reports. Counting was done by hand.

The method of filing the report cards in the Surgeon General's Office was changed in October, 1917. Subsequent to that time all report cards received from any source in the Army were arranged in one general alphabetical file, in dictionary order, by surnames. Surnames were subdivided by Christian names, and similar Christian names by age, nativity, etc. All of the cards, or at least a large percentage, for a given case were brought together before any attempt was made to utilize their data. Inasmuch as it was necessary to prepare the statistical tables for the Surgeon General's annual reports from each year's material, it was not possible to assemble all the record cards for the war in one file before attempting to compile the statistics. Consequently this work was done by card groups for three or four months as the cards were assembled and alphabetized. An effort was made at the beginning of the work to use only the cards for completed cases, taking out all cards for incomplete cases, and placing them in a file to be worked later. This plan, however, involved so much additional labor in rearranging the cards that it had to be discontinued. Subsequently all report cards in every file were used, the disposition being shown as incomplete when necessary.

By regulations a report card (Form 52) was furnished for every case completed in hospital or in quarters, or carded for record only, during the current month, and for all patients remaining on sick report at the end of the month in which admitted, a second report card being required for the month in which the case was completed when more than one month was involved. For the purposes of the annual reports, on December 31 of each year a report card was required also for every patient remaining on sick report on that date. Very frequently, however, several cards in addition to those mentioned were ultimately received for cases of chronic character admitted to sick report several times, and especially for such cases originating in the field or overseas, for whom many transfers were involved. As the space on Form 52 is necessarily

limited, frequently nearly all of it was used for entering the case record, very little being available for other purposes. Moreover, these cards are permanent War Department records, to be used for obtaining information needed in adjusting claims against the Government for disabilities resulting from disease contracted or injuries occurring while in the military service. Aside from other reasons, this alone was sufficient to prevent the medical record section of the Surgeon General's Office from placing any confusing or disfiguring marks, such as code numbers, on the report cards.

It was apparent also that while directly transcribing the information on the report cards to great statistical sheets by hand, as had been the practice in peace, was fairly satisfactory for the statistics of a small army, this system was entirely too time consuming for such a large force as it was certain the country would soon have.

Steps were immediately taken, therefore, to change the system in vogue when, in October, 1917, the medical record section was organized.

With the radical change in system made at that time, the report cards remained the source of all information for individual records of disease and injury which, taken together, still constituted the basis for the vital statistics of our Army. But between the report cards and completed statistics an elaborate machinery was installed and operated. For this a code book, statistical perforated cards, and the Hollerith equipment were adopted.

A code was prepared which was so comprehensive that, after the data on the report cards had been coded, vital statistical information of practically any character could be obtained. Competent medical officers, and especially the distinguished representatives of practically every branch of medical science, who at the time were stationed in the Surgeon General's Office, assisted materially in the preparation of this code. The code book used in the Bureau of Medicine and Surgery, United States Navy, was also freely consulted. A medical officer recently returned from France brought with him samples of the statistical perforated card recently adopted by France; also the outline of the coding system which the French proposed to use. These were also used freely. The result was an elaborate coding book for diseases and traumatisms.

The code having been adopted—and this suffered but slight change during the war—the next step was to prepare a code card adapted for use with the Hollerith equipment. The code cards used were not exactly the same throughout the war. At the beginning, or for the nine months of 1917, both statistical code and perforated cards were used, one of each being employed for each medical and for each surgical case. What these were will be apparent by consulting Figures 14 and 15. Thereafter no statistical code card intervened between report card, Form 52, and perforated card. Limitation of space on the perforated cards still made it necessary to have one such card for medical cases and one for surgical cases (See Fig. 16). The life history and military status were of course the same for both these cards.

The card finally adopted had 45 columns of figures arranged to correspond with the subdivisions of the report card, Form 52. In the further discussion of the mechanics of preparing the statistics only the final statistical perforated card will receive consideration.

The actual steps in the plan finally adopted were as follows:

(1) Penciling the code numbers from the code book on the statistical perforated card in accordance with the entries on the report card which was consulted for the purpose. (It will be noted that in the illustration given, Fig 16, these numbers have been typewritten; this was not the practice, however. They were actually entered by pencil.) The clerks engaged in so entering the code numbers were known as "coders," and were of two, or rather three, classes; nonprofessional and so-called professional coders, the latter being subdivided into medical and traumatism coders, depending on whether they coded medical or surgical data. The so-called professional coders were not physicians, but older and more experienced clerks.

(2) The perforation of the code card by clerks, known as "punchers," was the next step.

The coders, in addition to transferring the information on Form 52 to the statistical perforated card, placed on the latter the Army serial number of the patient concerned. This was made the practice as soon as the War Department adopted serial numbers for Army personnel, which was early in 1918. This acted as a cross reference, so that no difficulty was subsequently experienced in connecting the original report card with the statistical perforated card in case of suspected error, readmission, etc. Much difficulty in this respect had previously been experienced.

Reference has been made above to a multiplicity of cards arriving at the Surgeon General's Office covering a case that had run a very long course. To keep track of these cases a space was provided on the statistical perforated card for cases remaining in hospital. Also provision was made on this card for a readmission record so that all subsequent records of a given case if returned to hospital for further treatment could be linked up with the original disease or injury. Statistical perforated cards were made for men killed in action from nominal lists furnished by The Adjutant General's Office.

Still another form used in the Surgeon General's Office remains to be described. This was the transcript card. In a way this form assumed the place of Form 52. That is to say, it was used, when Form 52 was not made, to transcribe data of individual cases from the list of sick and wounded, Form 53.

EXPLANATION OF TERMS AND METHODS USED.

(1) *White* is synonymous with Caucasian, but all are classed as whites save negroes, and natives enlisted or inducted outside of the United States.

(2) *Negro* is used interchangeably with colored.

(3) *American* troops include both white and negro troops, no distinction being made for Indians, Chinese, Filipinos, etc., inducted or enlisted in the United States.

(4) *Troops* is used as synonymous with enlisted men.

(5) *Strength* means the military population. Thus, if the annual strength of a camp is shown as 1,000, the interpretation is that there was an average of 1,000 men in the camp for every day of the year. Strength as used in this volume is reduced to a mean annual or a mean monthly basis.

(6) *Mean monthly strength* is the daily average strength for the month.

(7) *Mean annual strength* is the total of the monthly strengths divided by 12. This was generally satisfactory for purposes of comparison, but one false result of using mean annual strengths for comparing one camp with another must be pointed out. In camps occupied only or largely during epidemic periods, converting their strengths to mean annual strengths and then comparing them with camps occupied throughout the year gives a very incorrect result. Comparison by period of epidemic is of course the correct method.

(8) *Total of mean annual strengths.*—Ratios are figured throughout on total of mean annual strengths, April, 1917, to December 31, 1919, inclusive.

(9) *Cases, admissions, readmissions, and concurrent diseases, complications and sequelæ.*—The main tables in the present volume are based on records of admissions and not on those of cases. That is to say, while it is true, all admissions represent cases, on the other hand they do not give the total case incidence as it did not prove practical to record in them cases which coexisted at the time of admission or which occurred while a patient was on sick report. These coexisting affections and the subsequent affections in the course of a patient's stay on sick report might or might not have had any relation to the primary cause of admission. At all events, as already explained, they were not made of record in the main tables. A supplementary table has been prepared, however, entitled "Concurrent diseases, complications and sequelæ," which gives for each disease recorded as a primary cause of admission for enlisted men in the United States and Europe, such affections as coexisted and as occurred while men were on sick report.

The term admissions refers to admissions by original cause of admission. It includes: (*a*) All patients reported as treated in hospital; (*b*) all patients reported as treated in quarters and excused from military duty, when still attached to a combat organization, staff detachment, development battalion, or convalescent camp; (*c*) all patients reported as carded for record only when treated and not excused from duty, but whose disease or injury was of such character as to have a probable bearing upon their future physical fitness for military service; (*d*) all deaths; (*e*) all discharges for disability for enlisted men or retirements for disability for officers. Only one cause of admission was made of record as such. Furthermore, if a soldier with influenza subsequently developed lobar pneumonia, then purulent pleurisy, and finally tuberculosis, only one was counted, the cause of the primary admission. This plan was followed on the ground that the purpose of this statistical study was primarily to determine the number of men excused from military duty by original cause of disease, and not the number of cases of the various diseases treated.

The statistics, naturally, include only admissions and cases for which report cards were made and sent to the Surgeon General. A large number of men, not excused from military duty, were treated in military hospitals and dispensaries and were not so reported upon. These were mainly men treated for minor illnesses and injuries, for errors of refraction or other eye conditions, and for minor diseases of the ear, nose, and throat.

Readmissions were not counted as admissions. Thus, if a man admitted to hospital with measles was returned to duty and was subsequently readmitted within a very few days on account of otitis media considered to have resulted from the attack of measles, the second admission was charged to the measles,

the otitis media being shown as the complication. And only in Table 82 the final disposition, whether the man was returned to duty, died, or was discharged for disability, and the time lost, was charged to measles. Or, if a case of gonorrhea was detected and reported, the man not being excused from duty but receiving treatment while doing full duty, and the man subsequently developed a complicating epididymitis for which he was admitted to hospital, the entire time lost and the disposition was charged to the original admission for gonorrhea, the epididymitis being shown as the complication and only in Table 82.

(10) *Days lost and noneffective rate.*—Attention is invited to the fact that the days lost were credited to the original cause of admission. Noneffective rate shows the average number of men absent from duty for each day of the year. Thus, the noneffective rate, expressed as 25 per 1,000, means that for each day of the year there was an average of 25 men absent from duty on account of sickness out of each 1,000 strength; in other words, 2.5 per cent were unfit for duty.

(11) *Deaths and discharges for disability.*—For the vital statistics for the Surgeon General's reports, as published for the years 1909 to 1916, inclusive, the absolute numbers of deaths and discharges for disability for troops in the United States had been given in two columns. The first included all deaths or discharges for disability which occurred in the United States; the second included only deaths or disability discharges which were the result of cases that originally developed or became apparent in troops serving in the United States. In the same way, two columns were shown for American troops serving outside of the continental limits of the United States. The first column showed the number of deaths and discharges for disability which actually occurred in each country concerned, and the second column included cases which had been invalided to the United States, and in which deaths or discharges ultimately occurred there. At this time, in all instances, however, the ultimate disposition was charged to the month and the year in which it actually occurred. The place ratios, which were shown, were based on the second column of the absolute numbers.

This plan of double columns was abandoned during the war, and in handling the vital statistics of the war every effort was made to charge all discharges for disability, deaths, and time lost, to the original causes, places, and times of occurrence of primary admissions. This was done and tables were made, not only for all troops for the entire war period but for white and colored troops separately, in the United States and Europe, by months of original admission, and for those in the United States by definite camp or State location. The only exception made to this practice was due to the fact that sometimes it was not found possible to charge all suppurative pleurisies (empyema) and other very long-continued cases back to original cause of admission; of necessity these were charged to final condition.

This method of charging deaths to times and places of occurrence of the original admissions renders it difficult to compare the death rates so compiled with those of the Army in previous wars and with those of civil life, in which deaths and discharges are charged to the actual times and places of occurrence.

The epidemiological advantages of the system, however, were believed to outweigh the disadvantages.

It should also be noted here that deaths from operations done for removal of defects have been charged to the defects and not to the operations.

(12) *Rates* used are annual *ratios per thousand*, with the exception of the case fatality rates, which are expressed in percentages.

(13) *Injuries.*—Nonbattle injuries are included in the general tables. This is not the case with battle injuries, which are tabulated separately.

(14) *Classification.*—The diagnostic terms used and the numbers therefor are those of the International Classification of the Causes of Death, with terms for morbidity in addition. The grouping of this classification has been changed, but its numbers have been retained. For the classification of joint causes of death, it being practicable to specify only one cause, though two or more conditions actually existed and might have been responsible for the death, the international rules were used as a guide.

SECTION II.

TABLES.

TABLE 1.—*Strength of total Army, by months, all countries, officers and enlisted men, including white, colored, and native troops, Apr. 1, 1917, to Dec. 31, 1919, inclusive.*[a]

[a] Daily average strength for each month. Source of information: Monthly reports of sick and wounded to the Office of the Surgeon General.

[b] Source of information: From May to December, 1917, and for December, 1919, from the monthly reports of sick and wounded to the Office of the Surgeon General, with corrections made by comparison with the strength for the last day of the month as furnished by the Office of The Adjutant General. From Jan. 1, 1918, to Nov. 30, 1919, inclusive, from the office of The Adjutant General, the strength being that as of the last day of the month. Separate strengths for the white and colored enlisted men from Jan. 1, 1918, to Nov. 30, 1919, estimated, the estimation being based, for 1918, on the reports of organizations leaving the United States, supplemented by such meager reports as were received from troops traveling on transports; for 1919, on reports of the demobilization of troops, furnished to the Sanitation Division of the Surgeon General's Office, supplemented by a consideration of the strength of the colored troops serving in the United States and in all countries other than Europe.

a Daily average strength for troops in the United States, Philippine Islands, Panama, and Hawaiian Islands. Source of information: Monthly reports of sick and wounded to the Office of the Surgeon General.

For data concerning the strength for white troops in Europe, see footnote (*b*), Table 2.

The strength for the troops traveling on transports was estimated, the estimation being based, from May, 1917, through November, 1918, from reports of organizations from the various posts and camps in the United States, supplemented by the meager reports received from transports; from December, 1918, to November, 1919, inclusive, on reports furnished to the Sanitation Division of the demobilization of troops in the United States, supplemented by reports of organizations serving in the United States and in countries other than in Europe, and by the very meager reports of troops traveling on transports.

Strength for troops in Russia and Siberia obtained, for troops in Siberia, from monthly reports of sick and wounded to the Office of the Surgeon General; for troops in North Russia, Archangel district, from The Adjutant General of the Army, through the office of the Chief of Staff, the strength being as of the last day of the month.

b Includes China. (These troops were part of the Philippine command.)

c Includes "Country not stated."

[a] Strength for the United States, Philippine Islands, and Hawaiian Islands is the mean average daily strength. Source of information: Monthly reports of sick and wounded to the Office of the Surgeon General. For source of information of strength of troops in Europe and on transports, see footnote, [b], Table 2, and footnote [a], Table 3.

[b] Includes China. (These troops were part of the Philippine command).

[c] Includes "Country not stated."

Total	1,406,345	1,684,264	1,850,489	1,910,934	1,816,180

[a] Includes Field Artillery, Heavy Artillery, and Corps Artillery.
[b] Includes Transportation Corps, light railroads and roads, construction and forestry, engineers and trains, engineers special service, and engineers service battalions.
[c] Includes pioneer Infantry, machine-gun battalions.
[d] Includes ammunition trains, quartermaster labor, Motor Transport Corps, stevedores, supply trains, and Quartermaster Corps.
[e] Exeludes Air Service.
[f] Includes division headquarters and headquarters troops, train headquarters and military police, staffs, executive services, Army Service Corps, anti-aircraft machine gun, and arm of service unknown.

Source of information: Monthly returns of the strength of the American Expeditionary Forces from the adjutant general of the American Expeditionary Forces to The Adjutant General of the Army.
It will be noted that these figures do not exactly accord with those given for total strengths in Europe. The error is not material for the purposes of the present table.
Aviation and Signal Corps were not reported upon separately for the first five months of the year. During these months, while figures for the two taken together are correct, they are probably not exactly so for each.

[a] Deaths which occurred as the result of operations done for the removal of defects are charged to the defects. In some instances deaths have been wrongly charged to troops or localities for which no admissions or too few admissions are shown in other tables. This was due to clerical error which it is not now practicable to correct, and applies also to detailed tables which appear later. The number of deaths so involved is only 19. The total number of deaths is not affected by the error in question.

[b] Includes total strength for "Other countries and not stated."

Source of information: Medical reports to the Surgeon General's Office.

colored, Filipino, Porto Rican, and Hawaiian, Apr. 1, 1917, to Dec. 31, 1919, inclusive.

[a] Includes 9,710 men in the United States discharged from draft after a few days observation in camp. In some instances discharges for disability have been wrongly charged to troops or localities for which no admissions or too few admissions are shown in other tables. This was due to clerical error which it is not now practicable to correct, and applies also to detailed tables which appear later. The number of discharges for disability so involved is 1,406, nearly all of which (1,352) are in "Other countries and not stated." The total number of discharges for disability is not affected by the error in question.

[b] Includes total strength for "Other countries and not stated."

Source of information: Medical reports sent to the Surgeon General's Office.

[a] In some instances days lost have been wrongly charged to troops or localities for which no admissions or too few admissions are shown in other tables. This was due to clerical error which it is not now practicable to correct. The number of days lost so involved is 5,995 distributed throughout the table in small numbers. The total number of days lost is not affected by the error in question.

[b] Includes total strength for "Other countries and not stated."

Source of information: Medical reports to the Surgeon General's Office.

colored, Filipino, Porto Rican, and Hawaiian, Apr. 1, 1917, to Dec. 31, 1919, inclusive.

TABLE 52.—*Days lost, by countries, including transports, officers and enlisted men, white, colored,*

ABSOLUTE NUMBERS.

International classification No.	Cause.	Total United States Army.							
		Total officers and enlisted men, including native troops.	Total officers and enlisted men, American troops.	Total officers.	Total enlisted men, American troops.				Total native troops.
					White.	Colored.	Color not stated.	Total.	
	VIII. *Ear, diseases of.*								
76a	Otitis media	915,138	913,668	27,539	829,135	37,227	19,767	886,129	1,470
76b	Mastoiditis	105,598	105,451	2,476	96,072	5,175	1,728	102,975	147
76c	Otitis externa	13,616	13,399	483	12,147	211	558	12,916	217
76d	Defective hearing (cause not stated)	6,653	6,651	461	5,597	384	299	6,190	2
76e	Ear, other diseases of	13,692	13,601	817	11,530	878	376	12,784	91
	IX. *Nasal fossæ, diseases of.*								
86a	Adenoids	10,209	10,196	632	9,131	166	267	9,564	4
86b	Deviation of nasal septum, and spurs	130,526	130,329	13,113	114,578	1,006	1,632	117,216	197
86c	Nose, external deformity of	424	400	.....	400	.....	.....	400	24
86d	Turbinate hypertrophy	21,522	21,203	2,160	16,949	1,207	887	19,043	319
86e	Sinusitis (all)	225,735	225,389	24,886	184,941	11,357	4,205	200,503	346
86f	Polypus, nasal	8,890	8,838	1,005	7,273	362	198	7,833	52
86g	Perforated nasal septum	779	768	12	717	39	.....	756	11
86h	Rhinitis (cause not stated)	211,369	210,291	9,997	186,974	11,422	1,898	200,294	1,078
86i	Nasal fossæ, other diseases of	131,694	131,640	3,248	110,559	17,273	560	128,392	54
	X. *Throat, diseases of.*								
87a	Laryngitis, acute catarrhal	200,821	200,375	10,775	174,645	9,005	5,950	189,600	446
87b	Larynx, other diseases of	2,093	2,003	81	1,654	259	18	1,922	.....
100a	Tonsillitis, acute	1,362,609	1,369,453	54,349	1,207,559	81,788	16,757	1,306,104	2,156
100b	Tonsillitis, chronic	335,854	335,352	33,084	289,870	8,592	3,806	302,268	502
100c	Tonsils, focal infection from	4,851	4,849	621	3,707	418	103	4,228	2
100d	Pharyngitis, acute catarrhal	370,521	369,247	17,985	315,451	19,898	15,913	351,262	1,274
100e	Pharynx, other diseases of	105,659	105,491	10,209	90,492	2,455	2,335	95,282	168
	XI. *Circulatory system, diseases of.*								
77	Pericarditis	14,534	14,503	378	12,373	1,518	234	14,125	31
78	Endocarditis, acute	11,595	11,595	338	9,696	1,108	453	11,257	.....

TABLE 55.—*Admissions, by months, white enlisted men in the*

ANNUAL RATIOS PER 1,000.

International classification No.	Cause.	Year, 1917.					
		April.	May.	June.	July.	August.	September.
	X. *Throat, diseases of.*						
87a	Laryngitis, acute catarrhal	8.95	11.00	5.43	1.75	1.73	1.72
87b	Larynx, other diseases of				.03		
100a	Tonsillitis, acute	93.98	87.60	70.79	43.57	41.35	33.46
100b	Tonsillitis, chronic	2.55	2.44	1.98	2.25	4.18	3.26
100c	Tonsils, focal infection from						
100d	Pharyngitis, acute catarrhal	17.63	15.20	11.37	6.20	5.01	4.95
100e	Pharynx, other diseases of	.26	.59	.31	.21	.32	.51
	XI. *Circulatory system, diseases of.*						
77	Pericarditis	.07	.10	.04	.10	.02	.08
78	Endocarditis, acute	.26	.05	.16	.08	.13	.11
79a	Valvular diseases of the heart	1.37	1.37	2.02	1.44	1.73	3.15
79a	(1) Aortic insufficiency	.26		.27	.18	.17	.37
79a	(2) Aortic stenosis	.07		.12		.06	.09
79a	(3) Mitral insufficiency	.98	1.32	1.51	1.12	1.39	2.16
79a	(4) Mitral stenosis	.07	.05	.12	.08	.11	.46
79a	(5) Combined lesions, mitral aortic						.02
79a	(6) Pulmonic lesions				.03		
79a	(7) Tricuspid lesions						.03
79a	(8) Valvular lesions, unclassified				.03		.02
79b	Cardiac hypertrophy	.13	.10	.12	.10	.21	.37
79c	Cardiac dilatation	.07	.10	.23	.16	.15	.12
79d	Myocarditis and myocardial insufficiency	.52	.39	.47	.52	.49	.70
79e	Heart, other organic diseases of	.46	.54	.19	.18	.38	.66
80	Angina pectoris	.07	.20	.04	.18	.15	.19
81a	Aneurysms		.10		.03	.02	.03
81b	Arteriosclerosis and hypertension			.04	.08	.06	.15
81c	Aortitis						
81d	Arteries, other diseases of					.02	.02
82	Embolism and thrombosis	.07	.10	.12		.02	.05
83a	Hemorrhoids	4.64	4.94	5.82	6.07	6.40	6.88
83b	Varicocele	1.83	1.91	3.26	3.22	3.50	3.62
83c	Varicose veins	1.04	.59	.82	1.10	1.26	1.55
83d	Phlebitis	.13	.20	.08	.10	.17	.29
84a	Status lymphaticus						
84b	Lymphatic system, other diseases of	5.16	4.94	5.32	4.94	4.27	3.76
85a	Cardiac arrhythmias	.07	.05		.03		.06
85b	Cardiac murmurs, not organic			.04	.03		
85c	Cardiac disorders, functional	.07	.10	.23	.05	.15	.09
85d	Bradycardia	.07		.04		.11	.02
85e	Heart-block						
85f	Tachycardia	.91	.24	.50	.73	.62	.71
85g	Hemorrhage	.20	.10	.16	.08	.04	.09
85h	Circulatory system, other diseases of	.07	.10	.08		.06	.05
	XII. *Respiratory system, diseases of.*						
89–90	Bronchitis	71.64	55.87	33.26	19.25	27.77	33.72
91	Pneumonia, broncho- [a]	2.61	1.66	.85	.39	.66	.94
92a	Pneumonia, lobar	11.69	8.46	4.42	2.69	2.52	3.32
93a	Pleurisy, suppurative	.46	.20	.31	.18	.21	.15
93b	Pleurisy, serofibrinous	.98	.54	.89	.42	.62	.53
93c	Pleura, other diseases of	4.05	3.42	2.91	1.67	3.11	3.37
95	Gangrene of lungs			.04		.02	
96	Asthma	.65	.39	.62	.47	1.24	2.01
97	Pulmonary emphysema				.03		.09
98	Lungs, other diseases of	.33	.15	.39	.10	.32	.54
	XIII. *Digestive system, diseases of.*						
99a	Pyorrhea alveolaris	.39	.24	.19	.42	.32	.42
99b	Abscess, periapical, focal infection from						.02
99c	Mouth and annexa, other diseases of	3.53	4.11	2.79	2.93	3.18	3.28
101	Esophagus, diseases of						.02
102a	Ulcer of the stomach	.33	.05	.08	.42	.41	.53
102b	Gastroenteroptosis	.07		.04	.03	.06	.02
102c	Stomach, other diseases of	8.23	9.87	11.68	12.00	15.67	14.82
105a	Duodenal ulcer	.13	.05	.16	.16	.15	.19
105b	Diarrhea	2.09	2.49	4.70	5.44	6.21	6.54
105c	Enteritis and colitis	17.63	17.11	23.75	26.88	43.36	32.05
106	Ankylostomiasis (uncinariasis, hookworm)	.46	.68	.35	.39	.75	.45
107a	Ascaris lumbricoides		.10			.02	
107b	Cestodes	.39	.39	.16	.34	.30	.22
107c	Intestinal parasites (others)	.07	.10	.12	.03	.04	.08
108	Appendicitis	8.62	9.97	9.47	10.25	11.37	10.60
109a	Hernia	6.01	5.28	5.86	7.24	6.55	9.27
109b	Intestinal obstruction	.33	.20	.19	.16	.15	.12
110a	Fistula in ano	.33	.73	.27	.60	.47	.85
110b	Intestines, other diseases of	29.78	44.39	43.90	36.20	43.55	30.09

[a] Includes pneumonia, unclassified.

United States, Apr. 1, 1917, to Dec. 31, 1919, inclusive—Continued.

		October and preceding.	November	December.	January.	February.	March.	April.	May.	June.	July.	August.
	V. *Nervous system, diseases of (all).*											
60	Encephalitis					1.24	3.12				0.51	0.15
61	Meningitis, simple											
62	Locomotor ataxia											
63b	Spinal cord, diseases of (others)											
64	Apoplexy						1.04				.25	
66a	Facial paralysis											
66b	Paraplegia											
66c	Paralysis without specified cause (others)								0.42			.31
69	Epilepsy		5.03	4.48		2.48	2.08	2.84	1.27	0.72	1.53	1.68
74a	Jacksonian epilepsy			2.24								
74b	Neurasthenia					1.24				.72	.51	.31
74e	Enuresis		5.03	2.24	1.38			.95	.42			
74d	Neurosis										.25	.15
74e	Neuro-circulatory asthenia (disordered action of the heart).						1.04			.36	.25	.46
74f	Shell-shock (cause not given)									.36	.76	.15
73a	Hysteria and results (psychoses excepted)			6.73					.42		.51	.61
73b	Neuralgia			4.48	8.30	7.45	7.28	5.68	2.97		.51	.15
73e	Neuritis				9.68	1.24	1.04	2.84	.42		1.02	.76
74g	Nervous system, other diseases of		20.10		2.77	2.48	2.08	.95	2.12			
	VI. *Mental alienation.*											
67	General paralysis of the insane								.42		.25	
68a	Constitutional psychopathic states			2.24								.31
68b	Mental deficiency		5.03	2.24	1.38	2.48		1.89	.85	4.70	1.53	.46
68e	Malingering		5.03			1.24			.42			.46
68d	Dementia præcox				1.38	2.48		1.89	.85	1.08	.51	.91
68e	Psychasthenia											
68f	Psychoneurosis				1.38					1.45	1.53	.91
68g	Psychosis, alcoholic		5.03					.95	.42			
68h	Psychosis, manic-depressive				1.38	1.24				.36		.15
68i	Psychoses (others)							.95	.42	.72	.76	.91
	VII. *Eyes and their annexa, diseases of.*											
75a	Refractive errors (all)						2.08		.85			.91
75a	(1) Astigmatism						2.08		.42			.46
75a	(2) Hyperopia											.31
75a	(3) Myopia											
75a	(4) Defective vision (cause not stated)								.42			.15
75b	Strabismus										.25	.15
75c	Leucoma											
75d	Cataract									.36	.25	
75e	Trachoma									.36	.25	
75f	Conjunctivitis (others)		35.18	8.97	8.30	4.97	11.44	3.79	5.52	6.14	4.32	1.22
75g	Pterygium		10.05							.72	.25	.46
75h	Amblyopia											
75i	Amaurosis							.95				
75j	Choroiditis							.95			.51	.15
75k	Iritis						1.04	1.89	2.97	.72	.51	.46
75l	Keratitis				4.15	4.97	2.08	1.89	2.55	3.61	1.53	.61
75m	Retinitis											
75n	Nystagmus											
75o	Glaucoma											
75p	Eyelids, diseases of						1.04	.95		.36	.25	.31
75q	Color-blindness											
75r	Eyes and annexa, other diseases of				2.77	1.24	1.04	1.89	1.27	.72	.25	.15
	VIII. *Ear, diseases of.*											
76a	Otitis media		15.08	6.73	17.98	16.15	28.07	22.73	10.18	7.23	5.09	4.57
76b	Mastoiditis							.95		1.45	.25	
76c	Otitis externa				1.38	1.24						
76d	Defective hearing (cause not stated)							.95				
76e	Ear, other diseases of										.25	.15
	IX. *Nasal fossæ, diseases of.*											
86a	Adenoids								.42			
86b	Deviation of nasal septum, and spurs					1.24	1.04			.36		
86d	Turbinate hypertrophy								.42			
86e	Sinusitis (all)			2.24	13.83	6.21	10.40	9.47	2.97	.36	1.02	1.98
86f	Polypus, nasal				1.38							
86h	Rhinitis (cause not stated)					11.18	8.32	53.98	44.97	10.12	2.04	.15
86i	Nasal fossæ, other diseases of				1.38				.42	.72		.31
